

HEALTHSPAN

HEALTHSPAN HQ

Product Specialist User Manual

For the PS field team

hq.healthspan.ph · September 2026 · the app updates weekly — this manual describes what is live today

1 • Getting started

Sign in

1. Open hq.healthspan.ph in any browser (Safari, Chrome — phone, iPad, or computer).
2. Enter your Healthspan email and password. Tick Remember me on your own device; leave it unticked on shared computers.
3. Forgot your password? Ask an admin — they can set a new one in seconds. You can change it anytime via the password link at the bottom of the sidebar.

Install it as an app (do this once)

1. On iPhone/iPad: open hq.healthspan.ph in Safari → tap Share → Add to Home Screen.
2. On Android: open it in Chrome → menu ⋮ → Add to Home screen.
3. It now opens full-screen like a real app, with the Healthspan icon.
4. Make the bottom bar yours: Menu → ☆ Customize bar — pick the pages you use most for one-tap access. Home and Menu are always there (specialists also keep Log visit and New order fixed, with 2 free slots; everyone else picks 4).

Your favourites

1. Star any page from the ☆ in the top bar. It pins to the top of the sidebar, directly under Home, and to the top of your home page — one list, both places, so there is nothing to keep in sync.
2. Prefer to set them all at once? **Choose favourites** — the edit link on the home row, or Menu → Choose favourites on a phone — opens the full picker. Up to **10**.
3. The Favourites heading in the sidebar collapses and expands like every other section, and remembers which way you left it.
4. They are yours, on this device, the same as the bottom bar — and only pages your role can open are ever offered.

Sorting any table

Click any column heading to sort A-Z; click it again for Z-A. It works on every table in HQ. Money, quantities, dates and expiry months sort by their real value, not alphabetically, and blank cells always go to the bottom. Section headings and TOTAL lines stay put. The sort lasts until the page redraws — it is a way to look at what is on screen, not a saved setting.

When a page refreshes

After you do something — add a line, submit a form, approve, release — the page updates in place. It does not blank out or jump back to the top; whatever you were looking at stays put while the new numbers land. You only see a "Loading" message when you open a page for the first time.

Attaching files

Where you see + Attach, you can add files straight from your phone or computer — photos, quotations, receipts, signed slips. They are stored in the Healthspan Google Drive, and opening one goes back through HQ, so your access here decides what you can see. Anything over about 4 MB opens in Drive instead. Remove a file with the × beside it.

1. On an account: the **Documents** panel on the profile page, so a clinic's own paperwork lives with the clinic.
2. On a visit: the recent-visits list under Log a visit. You attach to visits you logged yourself — a photo of the shelf, a signed slip — and can see, but not touch, files on anyone else's.
3. On an order: the order page, where the DR, the signed copy and the proof of delivery belong.

4. On a pull-out request: the register row underneath the form.
5. On any of the seven finance forms: the register row that appears once you submit — quotations, receipts, bank approvals, BIR forms.
6. On a complaint: the report row, which is where the batch photo belongs.
7. A file can only be removed by whoever uploaded it (or by whoever runs that area). Removing it deletes it from Drive too, so the × asks first.

The bell

The bell at the top pings you when the system needs you — a red badge shows unread items. Tap it to see what happened and jump straight to the right page. It checks for news every 90 seconds. What pings whom is listed at the end of this manual.

Ask HQ

The Ask HQ button (top bar) answers plain-language questions over everything HQ knows — inventory, sales, receivables, cheques, approvals, backorders, quotes, pipeline — and its knowledge is automatically scoped to YOUR role: specialists get their own numbers, costs and margins only answer for finance and admin. Any hour, in the app or on Slack (/stock).

Your manual & view-only pages

The manual link at the bottom of the sidebar (phone: Menu → My manual) opens this manual INSIDE the app — read it there, download it, or pop it full screen. And wherever a page is read-only for your role, a banner at the top says so and names who actually edits it; the same pages carry a small “VIEW” badge on your home screen.

On your phone the bottom bar has your essentials; Menu reaches everything else.

TIP — Every number view has a plain-language description at the top and a “how is this calculated” section — read those before asking. Most views also export to CSV.

Home, navigation & everyday mechanics

Home is the command center: live stat chips (orders today, pending, open follow-ups...), a needs-attention line, and big launcher cards for your role. It updates in place while the data syncs — no flicker, no reload.

1. Sidebar search: type in the box at the top of the sidebar to filter every menu item; sections collapse and remember their state (Product lines starts collapsed).
2. Every page has a real URL: bookmark an account, an order, a pick list; the browser back button works; share links with teammates — they’ll see it with THEIR permissions.
3. Mobile: the bottom bar carries your essentials; the Menu button reaches every view, plus password change, sign-out, and theme.
4. Themes: Healthspan (brand blue, light/dark/system) or Classic — bottom of the sidebar.
5. Data freshness: the sheet syncs every 15 minutes; Shopify nightly at 2am; the footer shows the last sync. “Refresh” forces one.

My profile — your own page

1. **My profile** sits right under Home in the sidebar; tapping your name in the footer or the phone menu opens it too.
2. It shows who you are signed in as, every finance form you have filed and where each one stands, your open follow-ups and this month’s visits (if you carry a specialist tag, with a jump to your full sales page), any loaners you checked out, and the quick actions — password, manual, favourites.

3. On a phone or iPad, a small ← sits in the top bar whenever there is somewhere to go back to — and swiping right from the left edge of the screen does the same. At the bottom of the history it takes you Home.

Taking an order — the full mechanics

Order entry is where five checks run for you automatically. Open it from the Home card, the sidebar, or + New order on an account page (pre-fills the clinic).

The account line

1. Start typing; pick from the list. A “did you mean...?” guard catches near-duplicate spellings — pick the existing account, don’t create twins.
2. The moment an account is chosen you see its credit limit and open balance (if any). Promise deliveries with that line in view.

Adding products

1. Type/pick the product. Under the picker you immediately get the stock truth: X on hand · Y promised to pending orders · Z available to promise.
2. Pricing selector: À la carte, or any configured deal (5+1, 10+8...). Deals price per set and add the free line automatically.
3. Live promos apply themselves: if marketing has a promo running for that SKU, the discount or free units appear on their own, tagged with the promo name.
4. Qty is in sets when a deal is selected, units otherwise.
5. Free of charge tick = true samples/goodwill only (P0, counted as giveaways, never as deal units).

AVAILABLE TO PROMISE — ATP is a hard rule for specialists: you cannot add more units than Z. If the clinic needs more than Z, talk to your manager — they can override.

Submitting — what happens in the background

1. The order gets an HS-number and lands in the register instantly.
2. Within credit limit and threshold → it goes straight to the warehouse queue (supply chain is pinged).
3. Over the account’s credit limit, or above the company approval threshold → the order saves but HOLDS: managers are pinged, nothing ships until they decide, and you’re pinged the moment they do. Rejected = cancelled with the reason on record.
4. Unusual orders (3× the account’s usual size, or lines >30% below list outside a deal/promo) are flagged to managers automatically — not blocked, just visible.
5. During the parallel run, also enter the order in Shopify — the banner reminds you until cutover.

Quotations

Formal, numbered paper for clinics that decide by document. Quotes use the exact same pricing engine as orders — catalog prices, deals, live promos — so an accepted quote converts without a single number changing.

Creating and sending

1. Sales & CRM → Quotations → + New quotation.

2. Account, items (same picker and pricing selector as orders), validity date — defaults to 30 days.
3. Save → it gets a QT-number. Print produces the branded A4 with VAT split and validity date.
4. Mark it sent when it goes to the clinic. Expired open quotes get flagged automatically.

Closing the loop

1. Clinic says yes → mark accepted → → order: the order form opens prefilled; review and submit — credit, ATP, and approval checks all run as normal.
2. Clinic says no → lost with a reason (price / competitor / timing / no response). Honest reasons make the win-rate number mean something.
3. Pipeline syncs itself: accepting a quote marks the account's open opportunities WON and moves its stage to active; a lost quote records the loss and reason on the opportunity — the funnel maintains itself.
4. The view header shows open quote value, accepted count, and win rate for your own quotes.

You see and manage only your own quotes; your name is fixed as the specialist. Managers can decide status on anyone's.

Visits, follow-ups & the automatic to-do list

Logging a visit (~10 seconds)

1. Log visit → account → visit type → outcome → optional note → save. Add which products you endorsed — they show on the account's timeline.
2. Pick a FUTURE date to create a planned visit instead — it appears on the calendar and in the queue below.
3. A duplicate-name guard protects here too — always pick the existing account.
4. Attach as you go: each visit you logged carries + Attach in the list below the form, so a photo or a signed slip stays with the visit it belongs to.

Follow-ups & plans — the queue

One list of everything owed: follow-ups born from visit outcomes ("Follow-up needed"), planned visits, and the tasks the system creates by itself. Overdue items flag red. Tick ✓ done / ✓ visited as you go.

What the machine adds on its own (nightly)

1. Post-delivery follow-up: ~2 weeks after an order is fulfilled, a follow-up task appears for the account's owner.
2. Welcome call: a brand-new account's first order creates an onboarding task the next morning.
3. Both also ring the bell. They're deduplicated — the same order never nags twice.
4. Monday digest: every Monday the bell brings your week in one ping — booked ₱, orders, visits, open follow-ups.

Reorder due, pipeline & events

Reorder due

1. The system computes each clinic's median reorder cycle from its real history.
2. Accounts 25%+ past their cycle appear here (routed to their owner; you see your own).
3. One tap: log the visit or start the order. Going-quiet alerts follow the account's TIER: A = 30 days, B = 45, C = 60 — an important clinic gets flagged three times sooner.

4. Your 3 best calls: Monday mornings the bell brings each specialist their three highest-value accounts drifting past their rhythm — ranked by six-month value × how overdue.

Pipeline & opportunities

1. Stages: lead → contacted → qualified → active, seeded from real behavior; every move is audited; losses need a reason.
2. Opportunities: estimated value + expected close date per card; the header shows weighted pipeline (25/50/75/85%) and win rate.
3. Prospects convert with one tap from the Prospects tab.

Events calendar

One month grid merging campaigns, planned visits, and demo/training days — yours only. The weekly Calendar of Events, live.

Accounts (CRM) — one memory per clinic

One row per customer, merged across the OUT sheet, Shopify, and the visit log. Tap any row for the full profile page.

The account page

1. KPI cards (booked, shipped, momentum, visits) · health score 0–100 with its reasons · merged clickable timeline (orders open) · what-they-buy · “worth offering next” upsell panel mined from co-purchase history.
2. Details (Edit): contact person, phone, email/Viber, address, region & city, clinic type, specialty, tier A/B/C, source, delivery notes (these print on the DR), doctor’s birthday & clinic anniversary, LTO/PRC licenses with red/amber expiry pills, notes.
3. Contacts: doctor / purchaser / nurse with phone, email, Viber — add or remove inline.
4. Credit line: limit and open balance, right where you quote from.
5. Quick actions: + New order · + Log visit · Call / Viber quick-log (a phone touch counts like a visit — timeline, coverage, and the going-quiet alert all see it) · Statement.
6. Documents: quotations, signed DRs, clinic paperwork — attached to the account itself, so they are still there when the next person opens it.

The orders register & order pages

Every order ever — native HS orders plus the full migrated Shopify history (8,900+) — searchable, paginated (50/100/250 per page). You see your own orders; managers see all.

1. Search & pages: the register is served page-by-page from the database — search by account, specialist, or order number (HS-1042 works); 50/100/250 per page.
2. Tap an order for its full page: lines, status, shipment panel (courier, waybill, dispatched/delivered), payment panel (paid, balance, terms), notes.
3. Statuses: pending → fulfilled, or cancelled. Held orders show an approval banner until decided.
4. Printables from the order page: FEFO pick list / packing slip, and the branded Delivery Receipt with VAT split, the clinic’s delivery notes, and signature blocks.

Complaints log — quality reports with teeth

1. Anyone in the field files in seconds: account, product, batch from the box, what happened. Supply chain and management are pinged immediately.

2. The batch chip links straight into the recall trace — every other clinic that received the same lot, one tap away.
3. Statuses: open → investigating → closed. Closing requires a resolution note — the log is the compliance record and keeps everything, forever.

Pull-out requests — stock for internal use

Logistics → Pull-out requests. Anything leaving the warehouse that is not a sale — KOL engagements, brand campaigns, FOC promos, trade partnerships, launches and training — goes through here. It replaces the Google pull-out form, and unlike the form it actually holds the stock.

1. File a request (anyone with a login): pick the products from the catalogue — you see on-hand and available-to-promise beside each one — then quantity and unit, the fund source (the QBO class that pays for it), the reason, the product line, the date needed, and what it is for.
2. Submitting reserves the units immediately. They drop out of available-to-promise, so nobody can sell the same box while your request is pending. If there is not enough available you are warned but can still submit — the warehouse sees the shortfall.
3. The fund source approves. Only the person mapped to that class (or their named backup) can decide, and they are pinged the moment it lands. Approval notifies finance and the warehouse; a rejection comes back to you with the reason and frees the stock.
4. If you are an approver, the page opens with a banner naming the classes you own and what is waiting on you. Your approval rights come from the fund-source list, not from your access level — several approvers hold view-only access everywhere else in HQ and still approve their class normally.
5. The warehouse releases the goods — and that is the only step that moves stock: earliest-expiry-first, batch-stamped against the PL number, so a pulled lot is as traceable as a sold one.
6. Mark booked: during the parallel run the specialist still records it in Shopify; tick it here with the reference so nothing is left half-done.
7. Pull-outs are internal issues — they never count as sales, anywhere.

Finance forms

Seven forms live under Finance forms: pull-out requests, voucher for approval, request to order/pay, proof of payment, request for replenishment, expense reimbursement, and request for cash advance. They replace the Google forms and behave the same way as each other.

1. Anyone with a login can file one. Fill it in, submit, then attach the supporting documents to the row that appears in the register underneath — quotations, receipts, bank approvals, BIR forms.
2. Some sections appear only when they apply. Choosing “Pay” on a request to order/pay shows the supplier and bank fields; choosing “Order” shows the item rows instead. Only what you can see is submitted.
3. It then moves through approval steps set for that form. The register shows which step each request is on and who it is waiting for. You are told when yours is approved or rejected, and rejection always comes with the reason.
4. Nobody approves their own request — if you are the approver for a class and you file against it yourself, it goes to someone else.
5. You can cancel your own request while it is still pending, and nothing else about it.
6. Each form has its own number — V- for vouchers, RO- for requests to order/pay, PP- proofs of payment, RP- replenishments, RE- reimbursements, CA- cash advances, PL- pull-outs.

Who sees what: these carry bank details and personal claims, so the register is not open to everyone. You see your own requests, any waiting on your decision, and finance and admin see all of them. Attachments follow the same rule.

Expense reports — liquidating a revolving fund

1. For whoever holds a revolving fund. **Finance forms → Expense report**: the period covered, then one line per receipt — date, category, description, amount. The total must equal the lines, and every receipt attaches to the register row.
2. It gets an ER- number and moves through the approval steps set for this form, like every finance form. Approval clears the way to top the fund back up — that stays its own filing, the Request for replenishment.

Sales analytics — the scoreboard

1. Sales overview: units and value for any period (today → 12 months → custom), split deals vs à-la-carte vs true giveaways, charts included.
2. Sales vs target: monthly attainment by total, brand line, product, and specialist — the 245-row corporate target file, or in-app targets when set.
3. Per-specialist drill-downs and profile pages with month calendars.
4. Field coverage: contacts/day, accounts reached vs the whole universe, not-reached ranked by value.
5. Vs accounting: continuous peso-for-peso reconciliation to the official Sales Report.
6. Leaderboard & pace: MTD race + projected month-end attainment per specialist — the mid-month coaching tool.

Baked-in conventions: deal +1s are deal units (not free); “free” = ₱0 outside any deal; pull-outs and TEST never count as sales; native orders fold into sales totals only at cutover (no double counting).

You see the team views scoped to what the meeting shares, and your own numbers everywhere.

With or without Remedy

1. Remedy is a sister company and one of our customers, and Healthspan also sells to its own staff and academy. Accounting’s Sales Booked leaves both out.
2. So every sales view opens on **External only** — third-party sales, the same population accounting counts. The toolbar switch flips the whole page to **Incl. Remedy** when you want the full picture.
3. It is one setting across all the sales views, the booked chip on your home page and the Accounts list, so those pages can never show you two different answers. Every figure is labelled with which population it is.
4. The setting is yours, on this device, like the period and product-line filters.
5. On the Accounts list, External only subtracts each clinic’s internal orders rather than hiding the clinic — only an account whose every order was internal drops off the list. So a real clinic that once had an order mis-tagged still shows, minus that order.

TARGETS AND COMMISSIONS — Targets and commissions are the exception: they always count external sales only, whatever the toggle says. A target is set on third-party sales and commission is paid on them, so Remedy and internal orders never move either number.

CRM activity — visits & calls per specialist

1. Sales analytics → **CRM activity**: the field effort itself, per specialist — visits, calls, demos, accounts touched, active days, and how often a contact ends in an order, with a 13-week trend.

2. Calls are the call / follow-up / Viber quick-log visit types; everything else counts as a field visit. Planned visits count once they are done.
3. It reads the in-app visit log, so it is only as good as the logging discipline — activity is the input, the Sales views measure the output.

Business review — the monthly report, generated

1. Sales analytics → **Business review**: the monthly sales performance report computed from HQ — at a glance, brands vs target with a 13-month chart, products per brand, machines and demo units, accounts monitoring, clients & buying behaviour, one panel per specialist, then the plan. Pick the month at the top; figures are external sales only, as on Targets.
2. **What HQ noticed** is written by the page from the figures — pace against target, brands ahead and behind, first orders, repeat accounts going quiet, specialists on and off pace, activity that has not turned into orders. It re-reads the same way every time; the story behind the numbers goes in the commentary boxes.
3. Your own panel is marked **you**. Under it is your commentary box — what happened, what is closing, what needs help — with what you wrote last time beside it. **Draft with AI** gives you a first draft from your own figures; edit, then **Save**. The other boxes are the sales manager's and read-only for you.
4. **Export my slides** gives you a three-slide deck — cover, your performance slide (targets, pace, 13-month line, top accounts and products, HQ notes) and your commentary — for your part of the meeting.
5. Windows: revenue and targets reach back 13 months; orders, accounts and buying behaviour as far as the order index (about six months — older months blank those sections and say so); the visit log 120 days. In the first three days of a month nothing is projected.
6. Your own report is a deck of its own — the format you used to type by hand: at a glance, Key wins, Key challenges, Territory updates, territory sales by brand, product sales per brand, SkinPen utilisation (treatment kits per account per month), accounts monitoring, training & marketing activities, sales plan / forecast, proposals. HQ fills every number; you fill five boxes and the forecast table under your panel on the Business review.
7. Sales analytics → **Reports** shows your row: how many of your boxes are in, when you last wrote, and **PowerPoint / PDF** (the PDF opens print-ready — use Save as PDF). The sales manager sees the same status before the meeting, so an empty box shows.

Period close — what freezes when a month is signed off

Once accounting has signed a month off, the super admin closes it on the Cutover switches page. From then on, everything dated on or before the cut-off is frozen: order amounts, order dates, order lines, credit memos, cheque maturities and that month's targets.

1. What still works inside a closed month: recording a payment (a July invoice paid in September is September cash), marking shipments dispatched or delivered, picking and fulfilling, and assigning a DR number. Those are operational, not revenue-changing.
2. What is refused: changing an order's amount, date or lines; cancelling, trashing or restoring it; back-dating an open order into the closed month; deleting a cheque; editing a closed month's target. If a closed sale needs reversing, record a credit memo — which is the accounting-correct move anyway.
3. Why you cannot work around it: the rule lives in the database, not the screen. The app warns you first as a courtesy, but even a faulty page or a background job cannot rewrite a closed month.

4. Reopening is the same control and only the super admin has it — it warns exactly what is being unlocked.

Forecasting & the AI layer

1. Stockout forecast: trend + seasonal velocity per SKU; campaign windows banner it so promos stop being surprises.
2. Forecast accuracy (MAPE): each month's forecast is frozen automatically, then scored against actual movement — MAPE and bias per month, worst misses ranked. The forecast grades itself.
3. AI planning review: one click walks every SKU, campaigns, and recent misses → an exception report with 5 prioritized actions and quantities.
4. Ask HQ: plain-language questions over live inventory, sales by week and month, accounts, targets and specialists, in-app or Slack (/stock), any hour.

When the bell pings you

The bell pings only the person who ACTS — nobody is copied on someone else's action items. The queues themselves are always open in-app for anyone with access.

You get pinged when...	What to do	Where it takes you
Your held order is approved / rejected	Tell the clinic; if rejected, talk to your manager	Orders
Your order is fulfilled	Tell the clinic it's on the way	Orders
A follow-up / welcome call is due	Do the call, tick it done	Follow-ups & plans
One of your accounts is going quiet	Visit or call before they drift	Reorder due
An account is 60+ days past terms	Collect on your next visit	AR aging
A campaign / promo goes live	Offer it on this week's visits	Campaigns / Promotions
A quote you sent has waited a week	Chase it, or mark it lost so the pipeline stays honest	Quotations
A birthday or clinic anniversary is 3 days out	Plan the greeting or a visit around it	Accounts
Your pull-out is approved or rejected	Approved: the warehouse will release it. Rejected: read the reason	Pull-out requests

A good day in HQ

1. Morning: Follow-ups & plans + Reorder due — that's the call sheet.
2. After every call: log the visit while it's fresh (10 seconds).
3. Orders in HQ the moment they're confirmed (and Shopify during the parallel run).
4. Mid-month: Leaderboard & pace — amber means push now.
5. Friday: clear the follow-up queue.

Something looks wrong? Check Data health first (feed freshness and reconciliation), then tell the super admin. The app ships improvements weekly — if a step in this manual moved, it moved somewhere better.
