

HEALTHSPAN

HEALTHSPAN HQ

Viewer User Manual

For the support team (read-only)

hq.healthspan.ph · August 2026 · the app updates weekly — this manual describes what is live today

1 • Getting started

Sign in

1. Open hq.healthspan.ph in any browser (Safari, Chrome — phone, iPad, or computer).
2. Enter your Healthspan email and password. Tick Remember me on your own device; leave it unticked on shared computers.
3. Forgot your password? Ask an admin — they can set a new one in seconds. You can change it anytime via the password link at the bottom of the sidebar.

Install it as an app (do this once)

1. On iPhone/iPad: open hq.healthspan.ph in Safari → tap Share → Add to Home Screen.
2. On Android: open it in Chrome → menu : → Add to Home screen.
3. It now opens full-screen like a real app, with the Healthspan icon.
4. Make the bottom bar yours: Menu → ☆ Customize bar — pick the pages you use most for one-tap access. Home and Menu are always there (specialists also keep Log visit and New order fixed, with 2 free slots; everyone else picks 4).

Sorting any table

Click any column heading to sort A-Z; click it again for Z-A. It works on every table in HQ. Money, quantities, dates and expiry months sort by their real value, not alphabetically, and blank cells always go to the bottom. Section headings and TOTAL lines stay put. The sort lasts until the page redraws — it is a way to look at what is on screen, not a saved setting.

When a page refreshes

After you do something — add a line, submit a form, approve, release — the page updates in place. It does not blank out or jump back to the top; whatever you were looking at stays put while the new numbers land. You only see a "Loading" message when you open a page for the first time.

The bell

The bell at the top pings you when the system needs you — a red badge shows unread items. Tap it to see what happened and jump straight to the right page. It checks for news every 90 seconds. What pings whom is listed at the end of this manual.

Ask AI

The Ask AI button answers plain-language questions over everything HQ knows — inventory, sales, receivables, cheques, approvals, backorders, quotes, pipeline — and its knowledge is automatically scoped to YOUR role: specialists get their own numbers, costs and margins only answer for finance and admin. Any hour, in the app or on Slack (/stock).

Your manual & view-only pages

The manual link at the bottom of the sidebar (phone: Menu → My manual) opens this manual INSIDE the app — read it there, download it, or pop it full screen. And wherever a page is read-only for your role, a banner at the top says so and names who actually edits it; the same pages carry a small "VIEW" badge on your home screen.

TIP — Every number view has a plain-language description at the top and a "how is this calculated" section — read those before asking. Most views also export to CSV.

Your access: the circle read

Everyone in the weekly meeting sees the meeting's numbers in HQ, live, all week. Your account is strictly read-only.

Reported in the meeting	Where it lives in HQ
Top-line sales, brand vs target	Sales overview · Sales vs target
Receivables & overdue invoices	AR aging
Inventory value & movement	Inventory value · Monthly movement
Demos & calendar of events	Events calendar
Specialist performance	Leaderboard & pace
Campaigns & promos	Campaign calendar · Promotions
Pipeline	Pipeline

1. Every view explains itself (description + “how is this calculated”) and most export CSV.
2. Ask AI answers plain-language questions — use it freely.
3. Numbers look off? Check Data health first.

Not yours (on purpose): order entry, edits, payments, scans, user management, costs & margins.
 Needing a write = a role conversation with the super admin.

Pull-out requests — stock for internal use

Logistics → Pull-out requests. Anything leaving the warehouse that is not a sale — KOL engagements, brand campaigns, FOC promos, trade partnerships, launches and training — goes through here. It replaces the Google pull-out form, and unlike the form it actually holds the stock.

1. File a request (anyone with a login): pick the products from the catalogue — you see on-hand and available-to-promise beside each one — then quantity and unit, the fund source (the QBO class that pays for it), the reason, the product line, the date needed, and what it is for.
2. Submitting reserves the units immediately. They drop out of available-to-promise, so nobody can sell the same box while your request is pending. If there is not enough available you are warned but can still submit — the warehouse sees the shortfall.
3. The fund source approves. Only the person mapped to that class (or their named backup) can decide, and they are pinged the moment it lands. Approval notifies finance and the warehouse; a rejection comes back to you with the reason and frees the stock.
4. If you are an approver, the page opens with a banner naming the classes you own and what is waiting on you. Your approval rights come from the fund-source list, not from your access level — several approvers hold view-only access everywhere else in HQ and still approve their class normally.
5. The warehouse releases the goods — and that is the only step that moves stock: earliest-expiry-first, batch-stamped against the PL number, so a pulled lot is as traceable as a sold one.
6. Mark booked: during the parallel run the specialist still records it in Shopify; tick it here with the reference so nothing is left half-done.
7. Pull-outs are internal issues — they never count as sales, anywhere.

Something looks wrong? Check Data health first (feed freshness and reconciliation), then tell the super admin. The app ships improvements weekly — if a step in this manual moved, it moved somewhere better.
