

HEALTHSPAN

HEALTHSPAN HQ

Marketing User Manual

For the marketing team

hq.healthspan.ph · September 2026 · the app updates weekly — this manual describes what is live today

1 • Getting started

Sign in

1. Open hq.healthspan.ph in any browser (Safari, Chrome — phone, iPad, or computer).
2. Enter your Healthspan email and password. Tick Remember me on your own device; leave it unticked on shared computers.
3. Forgot your password? Ask an admin — they can set a new one in seconds. You can change it anytime from Settings (footer button; phone: Menu → Settings).

Install it as an app (do this once)

1. On iPhone/iPad: open hq.healthspan.ph in Safari → tap Share → Add to Home Screen.
2. On Android: open it in Chrome → menu : → Add to Home screen.
3. It now opens full-screen like a real app, with the Healthspan icon.
4. Make the bottom bar yours: Menu → ☆ Customize bar — pick the pages you use most for one-tap access. Home and Menu are always there (specialists also keep Log visit and New order fixed, with 2 free slots; everyone else picks 4).

Your favourites

1. Star any page from the ☆ in the top bar. It pins to the top of the sidebar, directly under Home, and to the top of your home page — one list, both places, so there is nothing to keep in sync.
2. Prefer to set them all at once? **Choose favourites** — the edit link on the home row, or Menu → Choose favourites on a phone — opens the full picker. Up to **10**.
3. The Favourites heading in the sidebar collapses and expands like every other section, and remembers which way you left it.
4. They are yours, on this device, the same as the bottom bar — and only pages your role can open are ever offered.

Sorting any table

Click any column heading to sort A-Z; click it again for Z-A. It works on every table in HQ. Money, quantities, dates and expiry months sort by their real value, not alphabetically, and blank cells always go to the bottom. Section headings and TOTAL lines stay put. The sort lasts until the page redraws — it is a way to look at what is on screen, not a saved setting.

When a page refreshes

After you do something — add a line, submit a form, approve, release — the page updates in place. It does not blank out or jump back to the top; whatever you were looking at stays put while the new numbers land. You only see a "Loading" message when you open a page for the first time.

Attaching files

Where you see + Attach, you can add files straight from your phone or computer — photos, quotations, receipts, signed slips. They are stored in the Healthspan Google Drive, and opening one goes back through HQ, so your access here decides what you can see. Anything over about 4 MB opens in Drive instead. Remove a file with the × beside it.

1. On an account: the **Documents** panel on the profile page, so a clinic's own paperwork lives with the clinic.
2. On a pull-out request: the register row underneath the form.
3. On any of the seven finance forms: the register row that appears once you submit — quotations, receipts, bank approvals, BIR forms.

4. A file can only be removed by whoever uploaded it (or by whoever runs that area). Removing it deletes it from Drive too, so the × asks first.

The bell

The bell at the top pings you when the system needs you — a red badge shows unread items. Tap it to see what happened and jump straight to the right page. It checks for news every 90 seconds. What pings whom is listed at the end of this manual.

Ask Healthspan

The Ask Healthspan button (top bar) answers plain-language questions over everything HQ knows — inventory, sales, receivables, cheques, approvals, backorders, quotes, pipeline — and its knowledge is automatically scoped to YOUR role: specialists get their own numbers, costs and margins only answer for finance and admin. Any hour, in the app or on Slack (/stock). A small dropdown in the drawer header lets you choose which model answers — Gemini Flash (default) or Claude Haiku — and remembers your pick on this device.

Your manual & view-only pages

The manual link at the bottom of the sidebar (phone: Menu → My manual) opens this manual INSIDE the app — read it there, download it, or pop it full screen. And wherever a page is read-only for your role, a banner at the top says so and names who actually edits it; the same pages carry a small “VIEW” badge on your home screen.

You hold the circle read plus full control of campaigns and promotions.

TIP — Every number view has a plain-language description at the top and a “how is this calculated” section — read those before asking. Most views also export to CSV.

Home, navigation & everyday mechanics

Home is the command center: live stat chips (orders today, pending, open follow-ups...), a needs-attention line, and big launcher cards for your role. It updates in place while the data syncs — no flicker, no reload.

The sidebar has two levels: a narrow rail of areas on the left — Home, Sales, Warehouse, Finance, Planning, Admin — and, beside it, the pages of the area you picked, under their usual section headings. Nothing moved out of reach: every page is still there, the rail only chooses which slice you see. Opening a page from a card, a favourite or a link switches the rail to its area for you. On a phone the Menu shows the same areas as a row of chips.

1. Sidebar search: type in the box above the list to find any page by name — results come from every area, not just the one you are in; clear the box to return to it. Sections collapse and remember their state (Product lines starts collapsed).
2. Fast open: HQ paints from the copy saved on your device and refreshes quietly behind it, so a second visit is near-instant even on clinic wifi. The Sync button forces a live read of the sheet when you need the number right now.
3. Every page has a real URL: bookmark an account, an order, a pick list; the browser back button works; share links with teammates — they’ll see it with THEIR permissions.
4. Mobile: the bottom bar carries your essentials; the Menu button reaches every view by area, plus Settings, your manual and Sign out.
5. Themes: Healthspan (brand blue, light/dark/system) or Classic — Settings (footer button; phone: Menu → Settings).
6. Data freshness: the sheet syncs every 15 minutes; Shopify nightly at 2am; the footer shows the last sync. “Refresh” forces one.

My profile — your own page

1. **My profile** sits right under Home in the sidebar; tapping your name in the footer or the phone menu opens it too.
2. It shows who you are signed in as, every finance form you have filed and where each one stands, your open follow-ups and this month's visits (if you carry a specialist tag, with a jump to your full sales page), any loaners you checked out, and the quick actions — password, manual, favourites.
3. On a phone or iPad, a small ← sits in the top bar whenever there is somewhere to go back to — and swiping right from the left edge of the screen does the same. At the bottom of the history it takes you Home.

Campaigns & the promotions engine

Campaign calendar

1. Each campaign: name, window, expected uplift, SKUs. It is a demand signal: the stockout forecast banners it and the AI review weighs it.
2. On start day the field team is pinged automatically.

Promotions engine (you configure)

1. Name (shows on order lines) · start/end window · eligible SKUs (comma list, or * for all).
2. Mechanic: Buy N get M free (free units auto-added) or % off (unit price discounted).
3. While LIVE it applies automatically in order entry AND quotations, every line tagged with the promo name — measurable in Sales overview.
4. Turn off / delete anytime; past orders keep their tagged lines.

Reorder due, pipeline & events

Reorder due

1. The system computes each clinic's median reorder cycle from its real history.
2. Accounts 25%+ past their cycle appear here — routed to each owner; you see everyone.
3. One tap: log the visit or start the order. Going-quiet alerts follow the account's TIER: A = 30 days, B = 45, C = 60 — an important clinic gets flagged three times sooner.
4. Your 3 best calls: Monday mornings the bell brings each specialist their three highest-value accounts drifting past their rhythm — ranked by six-month value × how overdue.

Pipeline & opportunities

1. Stages: lead → contacted → qualified → active, seeded from real behavior; every move is audited; losses need a reason.
2. Opportunities: estimated value + expected close date per card; the header shows weighted pipeline (25/50/75/85%) and win rate.
3. Prospects convert with one tap from the Prospects tab.

Events calendar

One month grid merging campaigns, planned visits, and demo/training days across the team. The weekly Calendar of Events, live.

Sales analytics — the scoreboard

1. Sales overview: units and value for any period (today → 12 months → custom), split deals vs à-la-carte vs true giveaways, charts included.
2. Sales vs target: monthly attainment by total, brand line, product, and specialist — the 245-row corporate target file, or in-app targets when set.
3. Per-specialist drill-downs and profile pages with month calendars.
4. Field coverage: contacts/day, accounts reached vs the whole universe, not-reached ranked by value.
5. Vs accounting: continuous peso-for-peso reconciliation to the official Sales Report.
6. Leaderboard & pace: MTD race + projected month-end attainment per specialist — the mid-month coaching tool.

Baked-in conventions: deal +1s are deal units (not free); “free” = ₱0 outside any deal; pull-outs and TEST never count as sales; native orders fold into sales totals only at cutover (no double counting).

With or without Remedy

1. Remedy is a sister company and one of our customers, and Healthspan also sells to its own staff and academy. Accounting’s Sales Booked leaves both out.
2. So every sales view opens on **External only** — third-party sales, the same population accounting counts. The toolbar switch flips the whole page to **Incl. Remedy** when you want the full picture.
3. It is one setting across all the sales views, the booked chip on your home page and the Accounts list, so those pages can never show you two different answers. Every figure is labelled with which population it is.
4. The setting is yours, on this device, like the period and product-line filters.
5. On the Accounts list, External only subtracts each clinic’s internal orders rather than hiding the clinic — only an account whose every order was internal drops off the list. So a real clinic that once had an order mis-tagged still shows, minus that order.

TARGETS AND COMMISSIONS — Targets and commissions are the exception: they always count external sales only, whatever the toggle says. A target is set on third-party sales and commission is paid on them, so Remedy and internal orders never move either number.

CRM activity — visits & calls per specialist

1. Sales analytics → **CRM activity**: the field effort itself, per specialist — visits, calls, demos, accounts touched, active days, and how often a contact ends in an order, with a 13-week trend.
2. Calls are the call / follow-up / Viber quick-log visit types; everything else counts as a field visit. Planned visits count once they are done.
3. It reads the in-app visit log, so it is only as good as the logging discipline — activity is the input, the Sales views measure the output.

Business review — the monthly report, generated

1. Sales analytics → **Business review**: the monthly sales performance report computed from HQ — at a glance, brands vs target with a 13-month chart, products per brand, machines and demo units, accounts monitoring, clients & buying behaviour, one panel per specialist, then the plan. Pick the month at the top; figures are external sales only, as on Targets.
2. **What HQ noticed** is written by the page from the figures — pace against target, brands ahead and behind, first orders, repeat accounts going quiet, specialists on and off pace, activity that has not turned into orders. It re-reads the same way every time; the story behind the numbers goes in the commentary boxes.

3. Every section is readable; the commentary boxes are written by the sales manager and by each specialist, so on this page they are view-only for you. The figures are the same as Targets and Scorecards — external sales only.
4. **Settings** (footer or phone menu) holds theme and light/dark mode, Change password, Sign out, favourites, the bottom bar and your manual.

Accounts (CRM) — one memory per clinic

One row per customer, merged across the OUT sheet, Shopify, and the visit log. Tap any row for the full profile page.

The account page

1. KPI cards (booked, shipped, momentum, visits) · health score 0–100 with its reasons · merged clickable timeline (orders open) · what-they-buy · “worth offering next” upsell panel mined from co-purchase history.
2. Details (Edit): contact person, phone, email/Viber, address, region & city, clinic type, specialty, tier A/B/C, source, delivery notes (these print on the DR), doctor’s birthday & clinic anniversary, LTO/PRC licenses with red/amber expiry pills, notes.
3. Contacts: doctor / purchaser / nurse with phone, email, Viber — add or remove inline.
4. Credit line: limit and open balance, right where you quote from.
5. Quick actions: + New order · + Log visit · Call / Viber quick-log (a phone touch counts like a visit — timeline, coverage, and the going-quiet alert all see it) · Statement.
6. Documents: quotations, signed DRs, clinic paperwork — attached to the account itself, so they are still there when the next person opens it.

Short-dated stock — working the shelf-life clock

Logistics → Short-dated stock. The expiry tracker tells you WHAT is running out of shelf life. This page is what we are DOING about it — every lot with units on hand expiring within six months, worst first, with the peso value at risk beside it.

1. Each lot gets a plan: discount or promo it, give it as FOC to a loyal account, transfer it to a Remedy branch, quarantine it as unsellable, or accept the write-off. Choosing “quarantine” offers to pull the units out of sellable stock immediately.
2. A plan carries an owner (who is actually doing it), a target date, and a note — which account, what discount.
3. Lots with no plan yet are flagged amber and totalled separately: that number is money nobody has decided about.
4. Done closes the lot with an outcome note, so the queue becomes a record of what was recovered and what was lost.
5. Discounts and giveaways still go through the normal promotion and order flow — this is the worklist, not a separate discount channel.

Pull-out requests — stock for internal use

Logistics → Pull-out requests. Anything leaving the warehouse that is not a sale — KOL engagements, brand campaigns, FOC promos, trade partnerships, launches and training — goes through here. It replaces the Google pull-out form, and unlike the form it actually holds the stock.

1. File a request (anyone with a login): pick the products from the catalogue — you see on-hand and available-to-promise beside each one — then quantity and unit, the fund source (the QBO class that pays for it), the reason, the product line, the date needed, and what it is for.

2. Submitting reserves the units immediately. They drop out of available-to-promise, so nobody can sell the same box while your request is pending. If there is not enough available you are warned but can still submit — the warehouse sees the shortfall.
3. The fund source approves. Only the person mapped to that class (or their named backup) can decide, and they are pinged the moment it lands. Approval notifies finance and the warehouse; a rejection comes back to you with the reason and frees the stock.
4. If you are an approver, the page opens with a banner naming the classes you own and what is waiting on you. Your approval rights come from the fund-source list, not from your access level — several approvers hold view-only access everywhere else in HQ and still approve their class normally.
5. The warehouse releases the goods — and that is the only step that moves stock: earliest-expiry-first, batch-stamped against the PL number, so a pulled lot is as traceable as a sold one.
6. Mark booked: during the parallel run the specialist still records it in Shopify; tick it here with the reference so nothing is left half-done.
7. Pull-outs are internal issues — they never count as sales, anywhere.

Finance forms

Seven forms live under Finance forms: pull-out requests, voucher for approval, request to order/pay, proof of payment, request for replenishment, expense reimbursement, and request for cash advance. They replace the Google forms and behave the same way as each other.

1. Anyone with a login can file one. Fill it in, submit, then attach the supporting documents to the row that appears in the register underneath — quotations, receipts, bank approvals, BIR forms.
2. Some sections appear only when they apply. Choosing “Pay” on a request to order/pay shows the supplier and bank fields; choosing “Order” shows the item rows instead. Only what you can see is submitted.
3. It then moves through approval steps set for that form. The register shows which step each request is on and who it is waiting for. You are told when yours is approved or rejected, and rejection always comes with the reason.
4. Nobody approves their own request — if you are the approver for a class and you file against it yourself, it goes to someone else.
5. You can cancel your own request while it is still pending, and nothing else about it.
6. Each form has its own number — V- for vouchers, RO- for requests to order/pay, PP- proofs of payment, RP- replenishments, RE- reimbursements, CA- cash advances, PL- pull-outs.

Who sees what: these carry bank details and personal claims, so the register is not open to everyone. You see your own requests, any waiting on your decision, and finance and admin see all of them. Attachments follow the same rule.

Expense reports — liquidating a revolving fund

1. For whoever holds a revolving fund. **Finance forms → Expense report:** the period covered, then one line per receipt — date, category, description, amount. The total must equal the lines, and every receipt attaches to the register row.
2. It gets an ER- number and moves through the approval steps set for this form, like every finance form. Approval clears the way to top the fund back up — that stays its own filing, the Request for replenishment.

The inventory command center

1. Dashboard: KPI cards, running-out-in-30-days, category split, out-of-stock commercial, expiring-in-3-months.
2. Action center: everything needing action today, prioritized — the daily to-do.
3. All SKUs: sortable master list; tap for the product drawer (batches, 13-month trend, deals, forecast).
4. Alerts: out of stock · low stock · negative stock · expiry tracker · reorder alerts — each with exact SKUs and quantities.
5. Planning: stockout forecast (trend + seasonal velocity) · stock coverage · reorder plan · reorder point · demand variability (CV classes) · ABC analysis · write-off forecast.
6. Batch view: every batch with expiry and bin, FEFO-ordered — the same data behind pick lists and recall.
7. Data health: feed freshness, price≠Shopify and stock≠Shopify reconciliation — the system tells you when to distrust its own feed.

Every view: plain-language description, “how is this calculated”, CSV export, full peso figures.

The ten simulators

Simulator	What it answers
What-if	Change price/velocity/lead time on one SKU — see stockout and cash effects
Promo rescue	Can a promo clear at-risk stock before it expires, and at what discount?
Budget optimizer	Best allocation of a fixed buying budget across SKUs
Service level	Safety stock needed for a chosen fill rate
Campaign surge	What a campaign’s uplift does to stock coverage
Monte Carlo stockout risk	Thousands of demand scenarios → probability of stockout per SKU
12-month projection	Stock trajectory a year out under current velocity
Cash-flow timeline	What the buying plan does to cash, month by month
Bulk-buy trade-off	Volume discount vs holding/expiry risk
Branch rebalancing	Which Remedy branch stock should move where

Each is one click, live data, with its method explained under the result.

Recall trace & product registrations

1. Batch recall trace (Logistics): type a SKU/batch → every clinic that received it with dates and quantities — OUT-sheet history plus ledger picks, so it survives the sheet’s retirement. Printable contact list in seconds.
2. Product registrations (Inventory): CPR/FDA type, number, expiry per SKU. Expired shows red (“EXPIRED Nd ago”), within 6 months amber countdown — both float to the top. Read-only for your role — flag renewals to finance/admin.

Forecasting & the AI layer

1. Stockout forecast: trend + seasonal velocity per SKU; campaign windows banner it so promos stop being surprises.
2. Forecast accuracy (MAPE): each month’s forecast is frozen automatically, then scored against actual movement — MAPE and bias per month, worst misses ranked. The forecast grades itself.

- 3. AI planning review: one click walks every SKU, campaigns, and recent misses → an exception report with 5 prioritized actions and quantities.
- 4. Ask Healthspan: plain-language questions over live inventory, sales by week and month, accounts, targets and specialists, in-app or Slack (/stock), any hour.

When the bell pings you

The bell pings only the person who ACTS — nobody is copied on someone else’s action items. The queues themselves are always open in-app for anyone with access.

You get pinged when...	What to do	Where it takes you
A campaign you configured goes live	Watch uptake in Sales overview from day one	Campaigns
A promo goes live	Order entry is applying it automatically	Promotions

Something looks wrong? Check Data health first (feed freshness and reconciliation), then tell the super admin. The app ships improvements weekly — if a step in this manual moved, it moved somewhere better.
