

HEALTHSPAN

HEALTHSPAN HQ

Product Specialist User Manual

For the PS field team

hq.healthspan.ph · August 2026 · the app updates weekly — this manual describes what is live today

1 • Getting started

Sign in

1. Open hq.healthspan.ph in any browser (Safari, Chrome — phone, iPad, or computer).
2. Enter your Healthspan email and password. Tick Remember me on your own device; leave it unticked on shared computers.
3. Forgot your password? Ask an admin — they can set a new one in seconds. You can change it anytime via the password link at the bottom of the sidebar.

Install it as an app (do this once)

1. On iPhone/iPad: open hq.healthspan.ph in Safari → tap Share → Add to Home Screen.
2. On Android: open it in Chrome → menu ⋮ → Add to Home screen.
3. It now opens full-screen like a real app, with the Healthspan icon.
4. Make the bottom bar yours: Menu → ☆ Customize bar — pick the pages you use most for one-tap access. Home and Menu are always there (specialists also keep Log visit and New order fixed, with 2 free slots; everyone else picks 4).

Sorting any table

Click any column heading to sort A-Z; click it again for Z-A. It works on every table in HQ. Money, quantities, dates and expiry months sort by their real value, not alphabetically, and blank cells always go to the bottom. Section headings and TOTAL lines stay put. The sort lasts until the page redraws — it is a way to look at what is on screen, not a saved setting.

When a page refreshes

After you do something — add a line, submit a form, approve, release — the page updates in place. It does not blank out or jump back to the top; whatever you were looking at stays put while the new numbers land. You only see a "Loading" message when you open a page for the first time.

Attaching files

Where you see  Attach, you can add files straight from your phone or computer — photos, quotations, receipts, signed slips. They are stored in the Healthspan Google Drive, and opening one goes back through HQ, so your access here decides what you can see. Anything over about 4 MB opens in Drive instead. Remove a file with the × beside it.

The bell

The bell at the top pings you when the system needs you — a red badge shows unread items. Tap it to see what happened and jump straight to the right page. It checks for news every 90 seconds. What pings whom is listed at the end of this manual.

Ask AI

The Ask AI button answers plain-language questions over everything HQ knows — inventory, sales, receivables, cheques, approvals, backorders, quotes, pipeline — and its knowledge is automatically scoped to YOUR role: specialists get their own numbers, costs and margins only answer for finance and admin. Any hour, in the app or on Slack (/stock).

Your manual & view-only pages

The manual link at the bottom of the sidebar (phone: Menu → My manual) opens this manual INSIDE the app — read it there, download it, or pop it full screen. And wherever a page is read-only for your role, a banner at the top says so and names who actually edits it; the same pages carry a small “VIEW” badge on your home screen.

On your phone the bottom bar has your essentials; Menu reaches everything else.

TIP — Every number view has a plain-language description at the top and a “how is this calculated” section — read those before asking. Most views also export to CSV.

Home, navigation & everyday mechanics

Home is the command center: live stat chips (orders today, pending, open follow-ups...), a needs-attention line, and big launcher cards for your role. It updates in place while the data syncs — no flicker, no reload.

1. Sidebar search: type in the box at the top of the sidebar to filter every menu item; sections collapse and remember their state (Product lines starts collapsed).
2. Every page has a real URL: bookmark an account, an order, a pick list; the browser back button works; share links with teammates — they’ll see it with THEIR permissions.
3. Mobile: the bottom bar carries your essentials; the Menu button reaches every view, plus password change, sign-out, and theme.
4. Themes: Healthspan (brand blue, light/dark/system) or Classic — bottom of the sidebar.
5. Data freshness: the sheet syncs every 15 minutes; Shopify nightly at 2am; the footer shows the last sync. “Refresh” forces one.

Taking an order — the full mechanics

Order entry is where five checks run for you automatically. Open it from the Home card, the sidebar, or + New order on an account page (pre-fills the clinic).

The account line

1. Start typing; pick from the list. A “did you mean...?” guard catches near-duplicate spellings — pick the existing account, don’t create twins.
2. The moment an account is chosen you see its credit limit and open balance (if any). Promise deliveries with that line in view.

Adding products

1. Type/pick the product. Under the picker you immediately get the stock truth: X on hand · Y promised to pending orders · Z available to promise.
2. Pricing selector: À la carte, or any configured deal (5+1, 10+8...). Deals price per set and add the free line automatically.
3. Live promos apply themselves: if marketing has a promo running for that SKU, the discount or free units appear on their own, tagged with the promo name.
4. Qty is in sets when a deal is selected, units otherwise.
5. Free of charge tick = true samples/goodwill only (P0, counted as giveaways, never as deal units).

AVAILABLE TO PROMISE — ATP is a hard rule for specialists: you cannot add more units than Z. If the clinic needs more than Z, talk to your manager — they can override.

Submitting — what happens in the background

1. The order gets an HS-number and lands in the register instantly.
2. Within credit limit and threshold → it goes straight to the warehouse queue (supply chain is pinged).

3. Over the account's credit limit, or above the company approval threshold → the order saves but HOLDS: managers are pinged, nothing ships until they decide, and you're pinged the moment they do. Rejected = cancelled with the reason on record.
4. Unusual orders (3× the account's usual size, or lines >30% below list outside a deal/promo) are flagged to managers automatically — not blocked, just visible.
5. During the parallel run, also enter the order in Shopify — the banner reminds you until cutover.

Quotations

Formal, numbered paper for clinics that decide by document. Quotes use the exact same pricing engine as orders — catalog prices, deals, live promos — so an accepted quote converts without a single number changing.

Creating and sending

1. Sales & CRM → Quotations → + New quotation.
2. Account, items (same picker and pricing selector as orders), validity date — defaults to 30 days.
3. Save → it gets a QT-number. Print produces the branded A4 with VAT split and validity date.
4. Mark it sent when it goes to the clinic. Expired open quotes get flagged automatically.

Closing the loop

1. Clinic says yes → mark accepted → → order: the order form opens prefilled; review and submit — credit, ATP, and approval checks all run as normal.
2. Clinic says no → lost with a reason (price / competitor / timing / no response). Honest reasons make the win-rate number mean something.
3. Pipeline syncs itself: accepting a quote marks the account's open opportunities WON and moves its stage to active; a lost quote records the loss and reason on the opportunity — the funnel maintains itself.
4. The view header shows open quote value, accepted count, and win rate for your own quotes.

You see and manage only your own quotes; your name is fixed as the specialist. Managers can decide status on anyone's.

Visits, follow-ups & the automatic to-do list

Logging a visit (~10 seconds)

1. Log visit → account → visit type → outcome → optional note → save. Add which products you endorsed — they show on the account's timeline.
2. Pick a FUTURE date to create a planned visit instead — it appears on the calendar and in the queue below.
3. A duplicate-name guard protects here too — always pick the existing account.

Follow-ups & plans — the queue

One list of everything owed: follow-ups born from visit outcomes ("Follow-up needed"), planned visits, and the tasks the system creates by itself. Overdue items flag red. Tick ✓ done / ✓ visited as you go.

What the machine adds on its own (nightly)

1. Post-delivery follow-up: ~2 weeks after an order is fulfilled, a follow-up task appears for the account's owner.
2. Welcome call: a brand-new account's first order creates an onboarding task the next morning.
3. Both also ring the bell. They're deduplicated — the same order never nags twice.
4. Monday digest: every Monday the bell brings your week in one ping — booked P, orders, visits, open follow-ups.

Reorder due, pipeline & events

Reorder due

1. The system computes each clinic's median reorder cycle from its real history.
2. Accounts 25%+ past their cycle appear here (routed to their owner; you see your own).
3. One tap: log the visit or start the order. Going-quiet alerts follow the account's TIER: A = 30 days, B = 45, C = 60 — an important clinic gets flagged three times sooner.
4. Your 3 best calls: Monday mornings the bell brings each specialist their three highest-value accounts drifting past their rhythm — ranked by six-month value × how overdue.

Pipeline & opportunities

1. Stages: lead → contacted → qualified → active, seeded from real behavior; every move is audited; losses need a reason.
2. Opportunities: estimated value + expected close date per card; the header shows weighted pipeline (25/50/75/85%) and win rate.
3. Prospects convert with one tap from the Prospects tab.

Events calendar

One month grid merging campaigns, planned visits, and demo/training days — yours only. The weekly Calendar of Events, live.

Accounts (CRM) — one memory per clinic

One row per customer, merged across the OUT sheet, Shopify, and the visit log. Tap any row for the full profile page.

The account page

1. KPI cards (booked, shipped, momentum, visits) · health score 0–100 with its reasons · merged clickable timeline (orders open) · what-they-buy · “worth offering next” upsell panel mined from co-purchase history.
2. Details (Edit): contact person, phone, email/Viber, address, region & city, clinic type, specialty, tier A/B/C, source, delivery notes (these print on the DR), doctor's birthday & clinic anniversary, LTO/PRC licenses with red/amber expiry pills, notes.
3. Contacts: doctor / purchaser / nurse with phone, email, Viber — add or remove inline.
4. Credit line: limit and open balance, right where you quote from.
5. Quick actions: + New order · + Log visit · Call / Viber quick-log (a phone touch counts like a visit — timeline, coverage, and the going-quiet alert all see it) · Statement.

The orders register & order pages

Every order ever — native HS orders plus the full migrated Shopify history (8,900+) — searchable, paginated (50/100/250 per page). You see your own orders; managers see all.

1. Search & pages: the register is served page-by-page from the database — search by account, specialist, or order number (HS-1042 works); 50/100/250 per page.
2. Tap an order for its full page: lines, status, shipment panel (courier, waybill, dispatched/delivered), payment panel (paid, balance, terms), notes.
3. Statuses: pending → fulfilled, or cancelled. Held orders show an approval banner until decided.
4. Printables from the order page: FEFO pick list / packing slip, and the branded Delivery Receipt with VAT split, the clinic's delivery notes, and signature blocks.

Complaints log — quality reports with teeth

1. Anyone in the field files in seconds: account, product, batch from the box, what happened. Supply chain and management are pinged immediately.
2. The batch chip links straight into the recall trace — every other clinic that received the same lot, one tap away.
3. Statuses: open → investigating → closed. Closing requires a resolution note — the log is the compliance record and keeps everything, forever.

Pull-out requests — stock for internal use

Logistics → Pull-out requests. Anything leaving the warehouse that is not a sale — KOL engagements, brand campaigns, FOC promos, trade partnerships, launches and training — goes through here. It replaces the Google pull-out form, and unlike the form it actually holds the stock.

1. File a request (anyone with a login): pick the products from the catalogue — you see on-hand and available-to-promise beside each one — then quantity and unit, the fund source (the QBO class that pays for it), the reason, the product line, the date needed, and what it is for.
2. Submitting reserves the units immediately. They drop out of available-to-promise, so nobody can sell the same box while your request is pending. If there is not enough available you are warned but can still submit — the warehouse sees the shortfall.
3. The fund source approves. Only the person mapped to that class (or their named backup) can decide, and they are pinged the moment it lands. Approval notifies finance and the warehouse; a rejection comes back to you with the reason and frees the stock.
4. If you are an approver, the page opens with a banner naming the classes you own and what is waiting on you. Your approval rights come from the fund-source list, not from your access level — several approvers hold view-only access everywhere else in HQ and still approve their class normally.
5. The warehouse releases the goods — and that is the only step that moves stock: earliest-expiry-first, batch-stamped against the PL number, so a pulled lot is as traceable as a sold one.
6. Mark booked: during the parallel run the specialist still records it in Shopify; tick it here with the reference so nothing is left half-done.
7. Pull-outs are internal issues — they never count as sales, anywhere.

Finance forms

Seven forms live under Finance forms: pull-out requests, voucher for approval, request to order/pay, proof of payment, request for replenishment, expense reimbursement, and request for cash advance. They replace the Google forms and behave the same way as each other.

1. Anyone with a login can file one. Fill it in, submit, then attach the supporting documents to the row that appears in the register underneath — quotations, receipts, bank approvals, BIR

forms.

2. Some sections appear only when they apply. Choosing “Pay” on a request to order/pay shows the supplier and bank fields; choosing “Order” shows the item rows instead. Only what you can see is submitted.
3. It then moves through approval steps set for that form. The register shows which step each request is on and who it is waiting for. You are told when yours is approved or rejected, and rejection always comes with the reason.
4. Nobody approves their own request — if you are the approver for a class and you file against it yourself, it goes to someone else.
5. You can cancel your own request while it is still pending, and nothing else about it.
6. Each form has its own number — V- for vouchers, RO- for requests to order/pay, PP- proofs of payment, RP- replenishments, RE- reimbursements, CA- cash advances, PL- pull-outs.

Who sees what: these carry bank details and personal claims, so the register is not open to everyone. You see your own requests, any waiting on your decision, and finance and admin see all of them. Attachments follow the same rule.

Sales analytics — the scoreboard

1. Sales overview: units and value for any period (today → 12 months → custom), split deals vs à-la-carte vs true giveaways, charts included.
2. Sales vs target: monthly attainment by total, brand line, product, and specialist — the 245-row corporate target file, or in-app targets when set.
3. Per-specialist drill-downs and profile pages with month calendars.
4. Field coverage: contacts/day, accounts reached vs the whole universe, not-reached ranked by value.
5. Vs accounting: continuous peso-for-peso reconciliation to the official Sales Report.
6. Leaderboard & pace: MTD race + projected month-end attainment per specialist — the mid-month coaching tool.

Baked-in conventions: deal +1s are deal units (not free); “free” = ₱0 outside any deal; pull-outs and TEST never count as sales; native orders fold into sales totals only at cutover (no double counting).

You see the team views scoped to what the meeting shares, and your own numbers everywhere.

Period close — what freezes when a month is signed off

Once accounting has signed a month off, the super admin closes it on the Cutover switches page. From then on, everything dated on or before the cut-off is frozen: order amounts, order dates, order lines, credit memos, cheque maturities and that month’s targets.

1. What still works inside a closed month: recording a payment (a July invoice paid in September is September cash), marking shipments dispatched or delivered, picking and fulfilling, and assigning a DR number. Those are operational, not revenue-changing.
2. What is refused: changing an order’s amount, date or lines; cancelling, trashing or restoring it; back-dating an open order into the closed month; deleting a cheque; editing a closed month’s target. If a closed sale needs reversing, record a credit memo — which is the accounting-correct move anyway.
3. Why you cannot work around it: the rule lives in the database, not the screen. The app warns you first as a courtesy, but even a faulty page or a background job cannot rewrite a closed month.

4. Reopening is the same control and only the super admin has it — it warns exactly what is being unlocked.

Forecasting & the AI layer

1. Stockout forecast: trend + seasonal velocity per SKU; campaign windows banner it so promos stop being surprises.
2. Forecast accuracy (MAPE): each month's forecast is frozen automatically, then scored against actual movement — MAPE and bias per month, worst misses ranked. The forecast grades itself.
3. AI planning review: one click walks every SKU, campaigns, and recent misses → an exception report with 5 prioritized actions and quantities.
4. Ask AI: plain-language questions over live inventory and sales, in-app or Slack (/stock), any hour.

When the bell pings you

The bell pings only the person who ACTS — nobody is copied on someone else's action items. The queues themselves are always open in-app for anyone with access.

You get pinged when...	What to do	Where it takes you
Your held order is approved / rejected	Tell the clinic; if rejected, talk to your manager	Orders
Your order is fulfilled	Tell the clinic it's on the way	Orders
A follow-up / welcome call is due	Do the call, tick it done	Follow-ups & plans
One of your accounts is going quiet	Visit or call before they drift	Reorder due
An account is 60+ days past terms	Collect on your next visit	AR aging
A campaign / promo goes live	Offer it on this week's visits	Campaigns / Promotions
A quote you sent has waited a week	Chase it, or mark it lost so the pipeline stays honest	Quotations
A birthday or clinic anniversary is 3 days out	Plan the greeting or a visit around it	Accounts
Your pull-out is approved or rejected	Approved: the warehouse will release it. Rejected: read the reason	Pull-out requests

A good day in HQ

1. Morning: Follow-ups & plans + Reorder due — that's the call sheet.
2. After every call: log the visit while it's fresh (10 seconds).
3. Orders in HQ the moment they're confirmed (and Shopify during the parallel run).
4. Mid-month: Leaderboard & pace — amber means push now.
5. Friday: clear the follow-up queue.

Something looks wrong? Check Data health first (feed freshness and reconciliation), then tell the super admin. The app ships improvements weekly — if a step in this manual moved, it moved somewhere better.
