

HEALTHSPAN

HEALTHSPAN HQ

IT — Specialist Account Admin User Manual

For IT

hq.healthspan.ph · September 2026 · the app updates weekly — this manual describes what is live today

1 · Getting started

Sign in

1. Open hq.healthspan.ph in any browser (Safari, Chrome — phone, iPad, or computer).
2. Enter your Healthspan email and password. Tick Remember me on your own device; leave it unticked on shared computers.
3. Forgot your password? Ask an admin — they can set a new one in seconds. You can change it anytime from Settings (footer button; phone: Menu → Settings).

Install it as an app (do this once)

1. On iPhone/iPad: open hq.healthspan.ph in Safari → tap Share → Add to Home Screen.
2. On Android: open it in Chrome → menu : → Add to Home screen.
3. It now opens full-screen like a real app, with the Healthspan icon.
4. Make the bottom bar yours: Menu → ☆ Customize bar — pick the pages you use most for one-tap access. Home and Menu are always there (specialists also keep Log visit and New order fixed, with 2 free slots; everyone else picks 4).

Finding your way

The sidebar has two levels: a narrow rail of areas on the left — Home, Sales, Warehouse, Finance, Planning, Admin — and, beside it, the pages of the area you picked, under their usual section headings. Every page is still there; the rail only chooses which slice you see, and opening a page from a card or a favourite switches the rail for you. On a phone the Menu shows the same areas as a row of chips. The search box above the list finds any page by name across every area.

HQ paints from the copy saved on your device and refreshes quietly behind it, so a second visit is near-instant even on clinic wifi.

Your favourites

1. Star any page from the ☆ in the top bar. It pins to the top of the sidebar, directly under Home, and to the top of your home page — one list, both places — and it follows your account, so the iPad, the phone and the laptop show the same favourites.
2. Prefer to set them all at once? **Choose favourites** — the edit link on the home row, or Menu → Choose favourites on a phone — opens the full picker. Up to **10**.
3. The Favourites heading in the sidebar collapses and expands like every other section, and remembers which way you left it.
4. They are yours, on this device, the same as the bottom bar — and only pages your role can open are ever offered.

Sorting any table

Click any column heading to sort A-Z; click it again for Z-A. It works on every table in HQ. Money, quantities, dates and expiry months sort by their real value, not alphabetically, and blank cells always go to the bottom. Section headings and TOTAL lines stay put. The sort lasts until the page redraws — it is a way to look at what is on screen, not a saved setting.

When a page refreshes

After you do something — add a line, submit a form, approve, release — the page updates in place. It does not blank out or jump back to the top; whatever you were looking at stays put while the new numbers land. You only see a "Loading" message when you open a page for the first time.

Attaching files

Where you see + Attach, you can add files straight from your phone or computer — photos, quotations, receipts, signed slips. They are stored in the Healthspan Google Drive, and opening one goes back through HQ, so your access here decides what you can see. Anything over about 4 MB opens in Drive instead. Remove a file with the × beside it.

- 1. On a pull-out request: the register row underneath the form.
- 2. On any of the seven finance forms: the register row that appears once you submit — quotations, receipts, bank approvals, BIR forms.
- 3. A file can only be removed by whoever uploaded it (or by whoever runs that area). Removing it deletes it from Drive too, so the × asks first.

The bell

The bell at the top pings you when the system needs you — a red badge shows unread items. Tap it to see what happened and jump straight to the right page. It checks for news every 90 seconds. What pings whom is listed at the end of this manual.

Ask Healthspan

The Ask Healthspan button (top bar) answers plain-language questions over everything HQ knows — inventory, sales, receivables, cheques, approvals, backorders, quotes, pipeline — and its knowledge is automatically scoped to YOUR role: specialists get their own numbers, costs and margins only answer for finance and admin. Any hour, in the app or on Slack (/stock). A small dropdown in the drawer header lets you choose which model answers — Gemini Flash (default) or Claude Haiku — and remembers your pick on this device. It is also a full page — Home → Ask Healthspan, or  in the drawer — that keeps every conversation: your chats on the left (search, rename, delete), the thread on the right. Chats are yours alone; nobody else can open them. Settings → Shortcuts chooses which one the top-bar button opens.

Your manual & view-only pages

The manual link at the bottom of the sidebar (phone: Menu → My manual) opens this manual INSIDE the app — read it there, download it, or pop it full screen. And wherever a page is read-only for your role, a banner at the top says so and names who actually edits it; the same pages carry a small “VIEW” badge on your home screen.

TIP — Every number view has a plain-language description at the top and a “how is this calculated” section — read those before asking. Most views also export to CSV.

Your access: the circle read

Everyone in the weekly meeting sees the meeting’s numbers in HQ, live, all week. Your account is strictly read-only.

Reported in the meeting	Where it lives in HQ
Top-line sales, brand vs target	Sales overview · Sales vs target
Receivables & overdue invoices	AR aging
Inventory value & movement	Inventory value · Monthly movement
Demos & calendar of events	Events calendar
Specialist performance	Leaderboard & pace
Campaigns & promos	Campaign calendar · Promotions

Pipeline	Pipeline
----------	----------

1. Every view explains itself (description + “how is this calculated”) and most export CSV.
2. Ask Healthspan answers plain-language questions — use it freely.
3. Numbers look off? Check Data health first.

Not yours (on purpose): order entry, edits, payments, scans, user management, costs & margins.
 Needing a write = a role conversation with the super admin.

With or without Remedy

1. Remedy is a sister company and one of our customers, and Healthspan also sells to its own staff and academy. Accounting’s Sales Booked leaves both out.
2. So every sales view opens on **External only** — third-party sales, the same population accounting counts. The toolbar switch flips the whole page to **Incl. Remedy** when you want the full picture.
3. It is one setting across all the sales views, the booked chip on your home page and the Accounts list, so those pages can never show you two different answers. Every figure is labelled with which population it is.
4. The setting is yours, on this device, like the period and product-line filters.
5. On the Accounts list, External only subtracts each clinic’s internal orders rather than hiding the clinic — only an account whose every order was internal drops off the list. So a real clinic that once had an order mis-tagged still shows, minus that order.

TARGETS AND COMMISSIONS — Targets and commissions are the exception: they always count external sales only, whatever the toggle says. A target is set on third-party sales and commission is paid on them, so Remedy and internal orders never move either number.

My profile — your own page

1. **My profile** sits right under Home in the sidebar; tapping your name in the footer or the phone menu opens it too.
2. It shows who you are signed in as, every finance form you have filed and where each one stands, your open follow-ups and this month’s visits (if you carry a specialist tag, with a jump to your full sales page), any loaners you checked out, and the quick actions — password, manual, favourites.
3. On a phone or iPad, a small ← sits in the top bar whenever there is somewhere to go back to — and swiping right from the left edge of the screen does the same. At the bottom of the history it takes you Home.

Pull-out requests — stock for internal use

Logistics → Pull-out requests. Anything leaving the warehouse that is not a sale — KOL engagements, brand campaigns, FOC promos, trade partnerships, launches and training — goes through here. It replaces the Google pull-out form, and unlike the form it actually holds the stock.

1. File a request (anyone with a login): pick the products from the catalogue — you see on-hand and available-to-promise beside each one — then quantity and unit, the fund source (the QBO class that pays for it), the reason, the product line, the date needed, and what it is for.
2. Submitting reserves the units immediately. They drop out of available-to-promise, so nobody can sell the same box while your request is pending. If there is not enough available you are warned but can still submit — the warehouse sees the shortfall.

3. The fund source approves. Only the person mapped to that class (or their named backup) can decide, and they are pinged the moment it lands. Approval notifies finance and the warehouse; a rejection comes back to you with the reason and frees the stock.
4. If you are an approver, the page opens with a banner naming the classes you own and what is waiting on you. Your approval rights come from the fund-source list, not from your access level — several approvers hold view-only access everywhere else in HQ and still approve their class normally.
5. The warehouse releases the goods — and that is the only step that moves stock: earliest-expiry-first, batch-stamped against the PL number, so a pulled lot is as traceable as a sold one.
6. Mark booked: during the parallel run the specialist still records it in Shopify; tick it here with the reference so nothing is left half-done.
7. Pull-outs are internal issues — they never count as sales, anywhere.

Finance forms

Seven forms live under Finance forms: pull-out requests, voucher for approval, request to order/pay, proof of payment, request for replenishment, expense reimbursement, and request for cash advance. They replace the Google forms and behave the same way as each other.

1. Anyone with a login can file one. Fill it in and **add the supporting documents before you submit** — the form has an Add file / Add receipt control that takes photos straight from a phone camera, or PDFs. They upload the moment the request is filed; you can still add more from the row in the register afterwards.
2. **Expense reimbursement** and **Expense report (revolving fund)** will not submit without at least one receipt — finance cannot process a line without one, so the form does not let it leave without one either.
2. Some sections appear only when they apply. Choosing “Pay” on a request to order/pay shows the supplier and bank fields; choosing “Order” shows the item rows instead. Only what you can see is submitted.
3. It then moves through approval steps set for that form. The register shows which step each request is on and who it is waiting for. You are told when yours is approved or rejected, and rejection always comes with the reason.
4. Nobody approves their own request — if you are the approver for a class and you file against it yourself, it goes to someone else.
5. You can cancel your own request while it is still pending, and nothing else about it.
6. Each form has its own number — V- for vouchers, RO- for requests to order/pay, PP- proofs of payment, RP- replenishments, RE- reimbursements, CA- cash advances, PL- pull-outs.

Who sees what: these carry bank details and personal claims, so the register is not open to everyone. You see your own requests, any waiting on your decision, and finance and admin see all of them. Attachments follow the same rule.

Expense reports — liquidating a revolving fund

1. For whoever holds a revolving fund. **Finance forms → Expense report**: the period covered, then one line per receipt — date, category, description, amount. The total must equal the lines, and every receipt attaches to the register row.
2. It gets an ER- number and moves through the approval steps set for this form, like every finance form. Approval clears the way to top the fund back up — that stays its own filing, the Request for replenishment.

Business review — the monthly report, generated

1. Sales analytics → **Business review**: the monthly sales performance report computed from HQ — at a glance, brands vs target with a 13-month chart, products per brand, machines and demo units, accounts monitoring, clients & buying behaviour, one panel per specialist, then the plan. Pick the month at the top; figures are external sales only, as on Targets.
2. Two tables back it: review_commentary (one row per month and section, RLS by role and by the specialist's own tag) and review_snapshots (insert-only). The PowerPoint library loads from a CDN on first export; if it fails the page says so and nothing else is affected.
3. **Settings** (footer or phone menu) holds theme and light/dark mode, Change password, Sign out, favourites, the bottom bar and your manual.

Your admin power: specialist accounts

1. Admin → Team & access — your role selector is fixed to Product specialist; the server enforces the same limit regardless of the screen.
2. Create: name, email, starter password (8+ chars), and the specialist tag — it **MUST** match the name their sales are tagged with (pick from suggestions); it locks their data to them.
3. Send starter passwords privately (never group chats). They change it in-app via the sidebar "password" link.
4. Disable the moment someone leaves — sign-in blocked instantly, records stay. enable restores.
5. Out of scope (route to an admin or the super admin): password resets, role changes, non-specialist accounts, deletion.

Situation	You do
New PS joins	Create the account day one; tag = their sales tag
PS leaves	Disable immediately
PS forgot password	Route to an admin (you can't reset)
Anyone else joins/leaves	Route to the super admin
Sign-in fails	Check disabled state, caps lock, then escalate

Something looks wrong? Check Data health first (feed freshness and reconciliation), then tell the super admin. The app ships improvements weekly — if a step in this manual moved, it moved somewhere better.
